Grow with nbn winners announced

Nine organisations across Australia have today been recognised for their outstanding use of connectivity within business, community or education through the Grow with **nbn** Program.

The Australian Information Industry Association (AIIA) and nbn joined forces in November last year to launch a \$150,000 grants program aimed at fostering innovation across the nation.

AIIA Chief Executive Officer Rob Fitzpatrick and nbn's Corporate Affairs Manager Russell Kelly today visited one of the major grant recipients – the Lab Network – at one of its computer labs at the Footscray Community Arts Centre.

The Lab Network, a Melbourne-based and fast-growing national network of technology clubs for 10 to 16 year-olds with High Functioning Autism or Asperger's Syndrome who enjoy working with IT and computers, took out the major grant in the Community Category. The Lab offers mentoring by technology professionals in areas such as programming, 3D, digital design and gaming.

A full list of grant recipients is provided below.

AIIA CEO Rob Fitzpatrick said that the team was overwhelmed with applications from all over the country.

"This is another of those moments when you can't help but feel proud of the phenomenal creativity, drive and purpose of our fellow Australians," he said.

"It's easy to get caught in the rhetoric of 'innovation being a 'dirty word'.

"Through the Grow with **nbn** Program, we have unearthed a myriad of examples of Australians leveraging connectivity via services over the **nbn**[™] network to help create and grow businesses that enhance education outcomes, solve real challenges faced by many in our communities, and grow business from any location – increasingly serving global markets.

"Each and every one of them is creating new employment and enhancing skills and AIIA is proud to play our role in sharing these great stories of Australian innovation."

nbn Corporate Affairs Manager Russell Kelly said that the grants program showcased how businesses and community organisations were making use connectivity over the **nbn**[™] network to benefit Australia.

"Through the Grow with **nbn** Program, we've unearthed some fantastic businesses and organisations that are leading the way in innovation around Australia."

Coordinator of the Lab Network, Alan Morgans said the children attending the Lab sessions were highly technically skilled and placed significant demands on the network with game playing, programming and live streaming.

“Children living with autism have great skills and potential and they can face big disadvantages because their different ways of thinking can lead to social isolation.

“This funding will help us expand our reach, help more children and improve online access to make a real difference to thousands of children living with Autism Spectrum Disorder around Australia.”

Mr Morgans said prior to connecting to services over the **nbn**[™] network, The Lab used 4G hotspots, which struggled to cope with the demands on the network.

“The children are quick to get distracted and having a good internet connection is paramount,” he said.

“Since connecting to services over the **nbn**[™] network, we can host up to 20 children simultaneously accessing the network.”*

In the next three years, the **nbn**[™] network will greatly improve Australia’s high speed, universal broadband access, with broadband anticipated to become a powerful source of competitive advantage for Australia.

The Grow with **nbn** Program 2017 encourages organisations to look at ways to take advantage of this to transform Australia’s businesses, charitable organisations and communities.

The winning organisations are:

Organisation	Grant Awarded	Category	Location
Fizzics Education	Major grant recipient	Education	Blacktown, NSW
Obelisk Systems	Major grant recipient	Business	Maitland, NSW
The Lab Network	Major grant recipient	Community	North Carlton, VIC
Living Connected	Minor Grant recipient and winner of nbn staff vote	Community	Wollongong, NSW
Canopi Learning Solutions	Minor grant recipient	Business	Coramba, NSW
Conexu Foundation	Minor grant recipient	Community	Brisbane, Qld
Stackable Regiments	Minor grant recipient	Education	Sunbury, VIC
Vicinity Marketing	Minor grant recipient	Education	Newcastle, NSW
SwitchDin	Minor grant recipient	Business	Mayfield West, NSW

Under the *Grow with **nbn** Program 2017* three major grants of \$25,000 and six minor grants of \$10,000 were offered, with one of the minor grants recipients to receive an additional \$15,000 through an **nbn** staff vote.

The grants program is designed to help promote and support organisations that are innovatively using services over the **nbn**[™] network for their activities.

nbn is very happy with the Lab Network's experience with the **nbn[™] network. Of course, end user experiences of the **nbn**[™] network may vary. Your experience including the speeds actually achieved over the **nbn**[™] network depends on the technology over which services are delivered to your premises and some factors outside our control like your equipment quality, software, broadband plans, signal reception and how your service provider designs its network.*
